Customer Journey Map

Date	30 June 2026
Team ID	------------
Project Name	Rising Waters
Maximum Marks	2 Marks

Phase of Journey	**Stage 1 - Access the Website**	**Stage 2 - Enter Rainfall Data**	**Stage 3 - View Prediction Result**
Actions *What does the customer do?*	• Opens the Rising Waters website. • Reads project information. • Clicks on "Start Prediction".	• Enters Annual Rainfall. • Enters seasonal rainfall values. • Clicks the "Predict" button.	• Views flood prediction result. • Reads flood safety recommendation. • Uses the information for planning.
Touchpoint *What part of the service do they interact with?*	• Home Page • Navigation Menu • Start Prediction Button	• Prediction Form • Input Fields • Submit Button	• Result Page • Flood/No Flood Message • Safety Tips Section
Customer Thought *What is the customer thinking?*	• "Can this system predict floods accurately?" • "Is it easy to use?" • "Will it help my area?"	•Did I enter the values correctly?" • "How long will prediction take?" • "Will the result be reliable?"	•"What does this prediction mean?" • "Should I take precautions?" • "Can I trust this result?"

Customer Feeling *What is the customer feeling?*	• Curious • Hopeful • Interested	• Focused • Slightly anxious • Expectant	• Relieved (No Flood) or Concerned (Flood) • Informed and prepared
Process Ownership *(Who is in the lead on this?)*	• Web Interface (Flask Frontend)	• User + Prediction Module (Machine Learning Model)	• Prediction Engine + Result Display Module
Opportunities *(How can we improve this stage?)*	• Improve website design. • Add project video. • Provide user guide.	• Validate inputs automatically. • Add sample rainfall values. • Improve loading speed.	• Display prediction confidence. • Show flood prevention tips. • Add rainfall graphs and historical comparisons.

- The Customer Journey Map for the Rising Waters – AI-Based Flood Prediction System illustrates the complete user experience, from accessing the website to receiving flood prediction results.
- It highlights the user's actions, interactions with the system, thoughts, emotions, and the responsibilities of each system component at every stage.
- The map also identifies opportunities for improvement, such as enhancing the user interface, validating inputs, and providing more detailed prediction insights.
- Overall, it helps ensure a simple, efficient, and user-friendly experience while supporting timely flood preparedness and decision-making.
